jminusminus

Class TokenInfo

- [java.lang.Object](#)
- [jminusminus.TokenInfo](#)

.

<https://powcoder.com>

```
class TokenInfo
extends Object
```

Add WeChat powcoder

A representation of tokens returned by the lexical analyzer method, getNextToken(). A token has a kind identifying what kind of token it is, an image for providing any semantic text, and the line in which it occurred in the source file.

• Constructor Summary

Constructors

Constructor and Description

```
TokenInfo(TokenKind kind, int line)
```

Construct a TokenInfo from its kind, and its line number.

```
TokenInfo(TokenKind kind, String image, int line)
```

Construct a TokenInfo from its kind, the semantic text forming the token, and its line number.

• Method Summary

Methods

Modifier and
Type

Method and Description

```
String
```

```
image()
```

Return the semantic text associated with the

	<code>token.</code>
<code>TokenKind</code>	<code>kind()</code> Return the token's kind.
<code>int</code>	<code>line()</code> Return the line number associated with the token.
<code>String</code>	<code>tokenRep()</code> Return the token's string representation.
<code>String</code>	<code>toString()</code> Return the token's image.

- **TokenInfo**

```
publicTokenInfo(TokenKindkind,
                Stringimage,
                intline)
```

Assignment Project Exam Help

Construct a `TokenInfo` from its kind, the semantic text forming the token, and its line number.

Parameters:

`kind` - the token's kind.

`image` - the semantic text comprising the token.

`line` - the line in which the token occurs in the source file.

Add WeChat powcoder

- **TokenInfo**

```
publicTokenInfo(TokenKindkind,
                intline)
```

Construct a `TokenInfo` from its kind, and its line number. Its image is simply its string representation.

Parameters:

`kind` - the token's identifying number.

`line` - identifying the line on which the token was found.

- **Method Detail**

- **tokenRep**

```
publicStringtokenRep()
```

Return the token's string representation.

Returns:

the string representation.

- **image**

```
publicStringimage()
```

Return the semantic text associated with the token.

Returns:

the semantic text.

- **line**

`public int line()`

Return the line number associated with the token.

Returns:

the line number.

- **kind**

`public TokenKind kind()`

Return the token's kind.

Returns:

the kind.

- **toString**

`public String toString()`

Return the token's image.

Overrides:

`toString` in class `Object`

Returns:

the image.
